

April 5, 2013

In our investigations for Oklahoma Green Schools we went to all the classrooms in the school and filled in a sheet that tells us how much energy that the class had used. When we were done we averaged all of the sheets information up and then filled out a form about all of our information. After we were done with our investigations we thought about how we could put it into action. We threw around some ideas and came up with our play. A lot of our students stayed after school and put a lot of effort into it.

Sincerely,
Zach

Dear, Oklahoma Green Schools

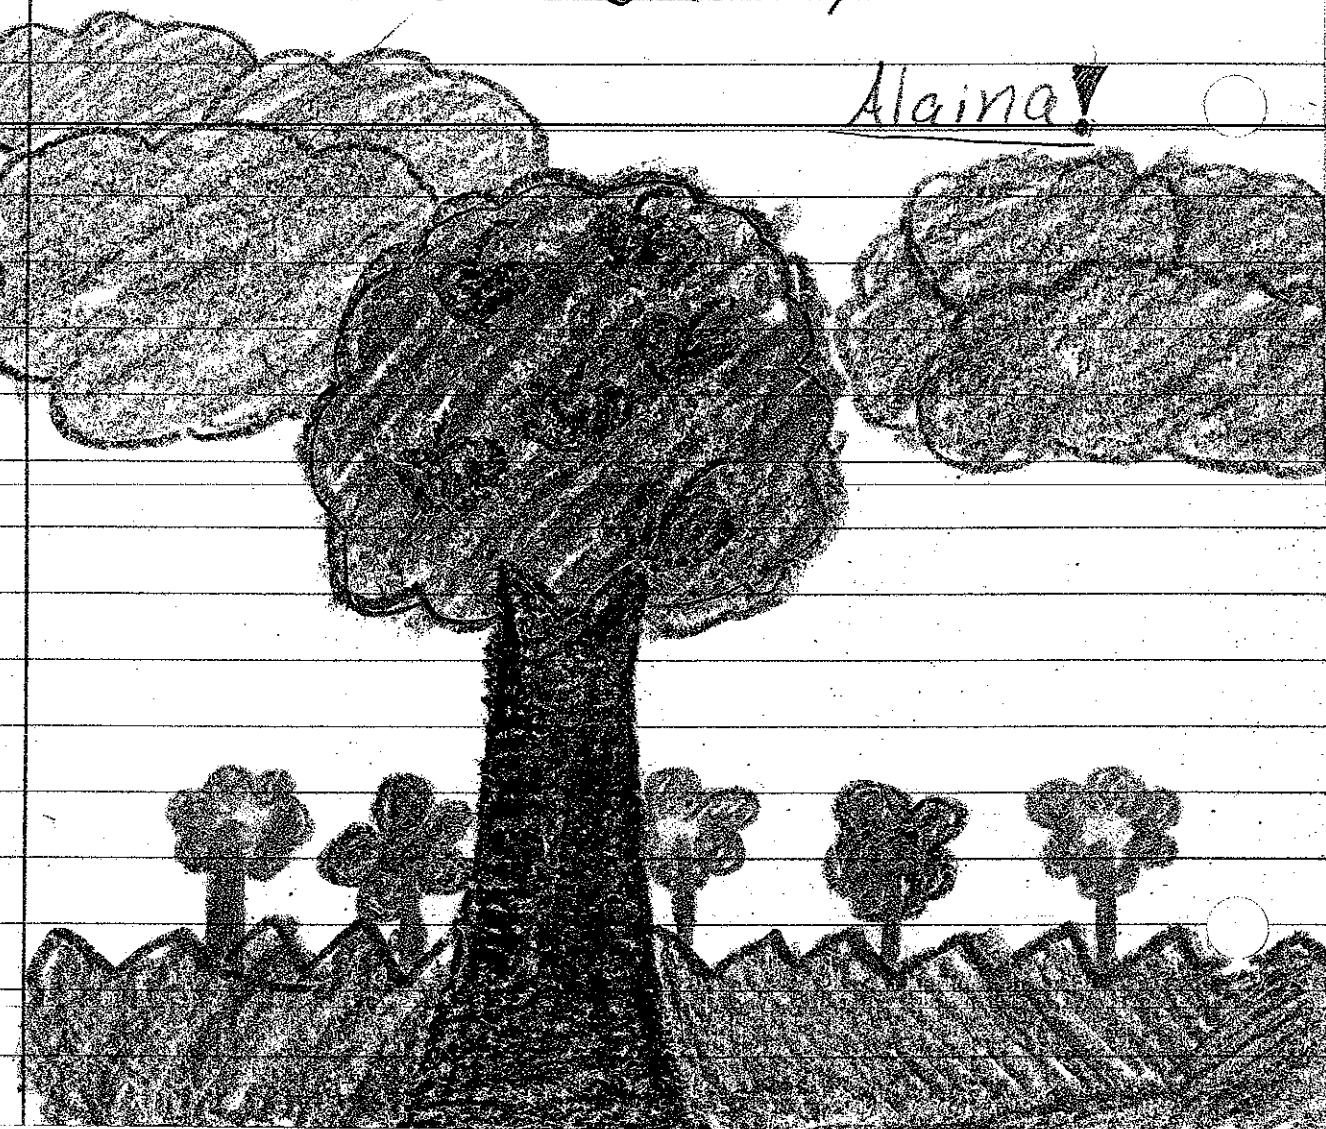

I enjoyed learning about all the tree facts and planting more trees at our school. There was many people that was included in this project. Just from this project I learned a ton. When we first started this project we had to find out what the percentages for impervious land, impervious parts of our school. Some

~~of~~ it was hard, but
most was really fun.

Thanks for the little
challenge it was really
fun.

Sincerely,

Alaina!

Dear, Oklahoma Green Schools

I Learned that we should

protect our tree's. I also learned

when you pull of the bark it's

like a big scab for the trees. I also

can get nasty stuff on it and

make it like it is sick.

I also loved when we planted

our first tree. We planted so

many trees at our school.

I thought this project was

so much fun I love trees.

Our school looks so much

better now with these new
trees. I just loved it so much

now I love trees even more.

Sincerely,

Erica.
